EXOTIC PEST COUNCIL'S LIST OF FLORIDA'S MOST INVASIVE SPECIES

1999 Invasive Plant List

Page 1 of 7

Florida Exotic Pest Plant Council's

1999

List of Florida's Most Invasive Species

Purpose: To focus attention on:

1. The impacts exotic pest plants have on native bio-diversity in Florida ecosystems.
2. The impact of exotic pest plants on the integrity of native plant community functions.
3. Habitat losses due to exotic plant infestations.
4. The impacts of exotic plants on endangered species via habitat loss and alteration (e.g., Cape Sable seaside sparrow).
5. The need to prevent such losses by comprehensive management for exotic pest plants.
6. The socioeconomic impacts of exotic pest plants (e.g., increased wildfires in *Melaleuca*).
7. Changes in the seriousness of different exotic pest plants over time.
8. The need to provide information that will help managers set priorities for management.

Definitions: *Exotic*—a non-indigenous species, or one introduced to this state, either purposefully or accidentally. A naturalized exotic, such as those listed here, has escaped into the wild where it reproduces on its own either sexually or asexually. *Native*—a species already occurring in Florida at the time of European contact (1500). *Invasive*—a variable condition defined by the category to which the species is assigned.

Abbreviations used: for "Government Listed": P=Prohibited by Fla. Dept. of Environmental Protection, N=Noxious weed as listed by Fla. Dept. of Agriculture & Consumer Services and/or U.S. Department of Agriculture.

For information on distributions within Florida, see: <http://www.usf.edu/~isb/projects/atlas/mapindex.html>

Category I—Species that are invading and disrupting native plant communities in Florida. *This definition does not rely on the economic severity or geographic range of the problem, but on the documented ecological damage caused.*

Scientific Name	Common Name	FLEPPC Rank	Government Listed
<i>Abrus precatorius</i>	rosary pea	I
